DOCUMENT WORK, MADE PRACTICAL

Read. Prepare. Share.

A practical Windows workspace for reading, arranging and finishing PDFs, with useful conversion tools for everyday team documents.

On-device processing | Original files preserved | Windows desktop

Actual application view with a synthetic training document.

One workspace for everyday document tasks.

Keep work on your device

Read, edit and convert locally. The application does not upload your open documents to a processing service.

Save a result you can share

Prepare a working copy, review it, then use Save As. Your original source file is preserved.

Choose the right workflow.

Four clear workspaces cover the tasks your team repeats most often.

01

Read

Search and copy selectable text. Choose single, continuous, two-page or four-page views. Pan, zoom and enter Focus view. Read Aloud uses installed local voices when text is available.

02

Organize

Build a pack from PDFs and prepared image or Office copies. Reorder, duplicate and rotate pages. Combine files, export selected pages or split ranges into a ZIP.

03

Edit / Fill

Add text, images, signatures, drawings and covers. Apply changes to page ranges, undo and preview. Use Redact content to remove underlying content on export; a cover only hides it visually.

04

Tools

Convert supported documents to PDF locally. Extract PDF tables to Excel or CSV and create Markdown from PDFs. Review the result: complex layouts and table structures may need adjustment.

A practical 3-minute start

01 Add files. Open a PDF, image, Office document, HTML, Markdown or text file.

02 Choose a workflow. Review in Read, arrange in Organize, or finish in Edit / Fill.

03 Preview and save. Check the result, choose Save As and keep the saved copy.

Before you share

Check page order and sensitive content. Use redaction when information must be removed. Save results before quitting; unsaved temporary work is cleared on exit.

Help improve the app: open Feedback after opening a file (or Settings > Share feedback). Give a score and a useful example of what worked or what should improve. Your response goes to your team's Microsoft Form; PDF Studio does not attach your documents.
